

Rotary 444

CHAIN OPERATED SOFT-SHADE CURTAIN SYSTEM SUITABLE FOR DOMESTIC OR PROFESSIONAL ENVIRONMENTS

Raising is done using belt winding spools operated by a clutch mechanism controlled by a chain, determining the curtain position.

Use of the step-down clutch reduces the effort needed to raise the curtain to 1/4.

The tape winding spools are fitted with a release for fast curtain removal.

The system is also fitted with universal joints for installing curved systems, both at 90° and with a wide radius.

Ceiling or wall installation using overhanging brackets.
