

Garden 551-552

SYSTEM FOR LARGE SKYLIGHT CURTAINS WITH MOTOR DRIVE

Screening and blackout curtains max: 700 g/m². Horizontal, vertical or angled sliding.

Large radius curvature (min. 50 cm).

The system permits parallel installation for large coverings.

The actuator consists of a 24 Vdc motor with wide-range switching power supply 90-250 Vac / 24 Vdc and electronics to control the system.

The sliding speed of the curtain is 12,5 cm/s.

Power is transmitted by means of a looped polyurethane toothed belt.

The control electronics have been developed to use the «Garden 551» system in wireless digital network or by wire with bi-directional exchange, between actuator and control device.

For ceiling or recessed installation.
